Top 10 Ways Vector Check It Solves Real Problems for Fire-EMS Agencies

Your Guide to Optimizing Checks, Inspections, and Asset Management

VectorSolutions™

Top 10 Ways Vector Check It Solves Real Problems for Fire-EMS Agencies

Running an efficient fire-EMS agency requires strategic planning and transparent oversight across your organization—there's no time for guesswork. Crews must be confident that they have what they need when they need it. That's where Vector Check It comes in.

> *"Since implementing Check It, we have reduced our list of missing inventory from 10 ½ pages down to just one now that we have everything documented and can easily audit our inventory."*
>
> **— Captain, Fire Department**

Explore the top 10 ways Vector Check It can help your fire department stay mission-ready with centralized management of apparatus, equipment, inventory, controlled substances, and all of your assets.

1. **Eliminates Paper Checklists—for Good**

   Stop using paper forms and clipboards and digitize daily truck checks, PPE inspections, and more, eliminating binders and sticky notes. Intuitively complete checks and inspections with the mobile app and automate alerts for timely reminders.

2. **Keeps Personnel Informed**

   Transparent, real-time, anywhere status insights keep everyone informed, from crews in the field to supervisors at the station. Know if rigs are out of service, equipment is being repaired, or if store rooms need restocking.

3. **Tracks Equipment Lifecycles**

   From fire hoses to defibrillator batteries, Check It helps you track inspection intervals, expiring dates, usage logs, and maintenance history. You'll know what needs service, what's expired, and what's nearing the end of its useful life.
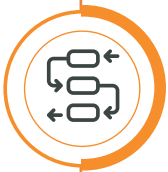

4. **Improved Inventory Accuracy**

   If you're tired of running out of essential supplies or over-ordering what you don't need, you can set minimum levels, manage station inventories, and log supply usage with Check It. Get real-time insight into what's where and if more needs to be ordered.
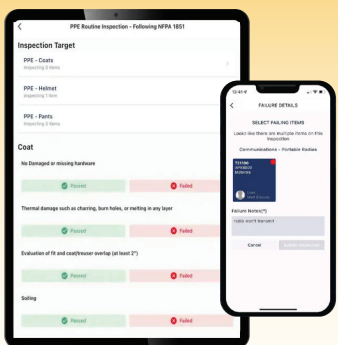

5. Mobile-First for Crews in the Field

With a native app built for iOS and Android, firefighters can perform checks anywhere, anytime, even offline. No need to return to the station or office—submit a truck check right from the bay or fill out a supply request at the scene.

6. Creates a Clear Maintenance Workflow

When an apparatus or piece of equipment needs maintenance or repair, Check It tracks tickets through every stage, automatically triggering alerts to mechanics or supervisors to reduce out-of-service time.

"Having access to the mobile app to do the rig check and submit it is so much easier than filling out the paperwork, scanning it, and putting it in the file."

— Assistant Chief, Fire Protection District

7. Provides Real-Time Oversight for Chiefs and Leaders

At-a-glance dashboards give command staff high-level and granular views of operational readiness across all stations. See what checks were late or missed, fleet spend, inventory withdrawals, and more—all in one place.

8. Standardizes Processes Across Shifts and Stations

Build custom checklists and workflows that ensure consistency across crews and locations. Everyone follows the same process, minimizing missed steps and improving accountability.

9. Ensures End-to-End Controlled Substances Tracking

Managing narcotics like fentanyl, ketamine, or morphine demands strict documentation and airtight chain-of-custody. Check It enables real-time logging of controlled substance access, usage, and inventory, including two-person verification, electronic signatures, and audit trails.

### 10. Creates Secure, Verifiable Historical Logs

Every action—every check, every fix, every controlled substance movement—is timestamped and logged. You'll have complete documentation ready for liability protection, compliance audits, purchase justification, and trend analysis.

Improve Training & Operational Efficiency Across Your Department

Check It is part of Vector's comprehensive software suite, including best-in-class training management, live skill evaluations, shift scheduling, and wellness solutions for fire and EMS.

Streamline operations, stay response-ready, and reduce risk with Vector Check It. If you've got trucks to check, PPE to manage, maintenance to track, and drug boxes to stock, you need Check It for greater visibility and flexibility to run more efficiently.
