

Acadis Insights

Powered by the Acadis Data Lake and Business Intelligence

Acadis® Insights is engineered and augmented by an accompanying Data Lake containing your Acadis data, ready for direct access using business intelligence tools such as Microsoft® Power BI®, which enables complex information and data correlations that are brought to life in custom visualizations, helping your organization make faster, better, smarter decisions.

Acadis Insights provides a systematic way to transform complex information into easy-to-understand and real-time dashboards with graphical representations to simplify analysis and enable better operational and personnel decisions.

Using Acadis Insights, you can also choose which dashboards are shared with each role in your organization—from leaders to supervisors to training coordinators. Acadis Insights ensures you're getting the information you need when you need it!

Acadis Insights Benefits

Real-Time Access to Information for Better Decision Making

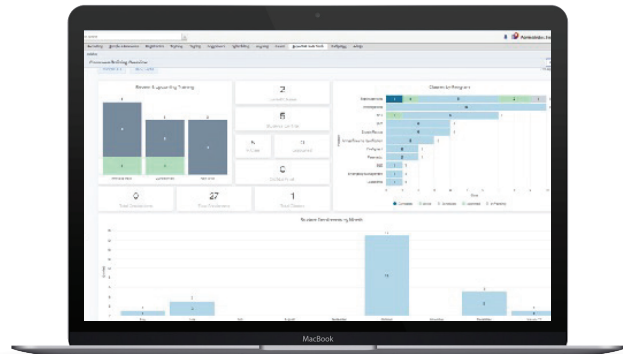

Quickly access accurate and up-to-date information using dashboards, tiles, and reports directly within Acadis.

Visualizations can be set up and easily refreshed as needed to provide ongoing, real-time information that enables data-driven decisions for faster, smarter, actionable outcomes.

Powerful Data Visualizations Tailored to your Mission

With NEW Acadis Insights, users have access to the full library of system dashboards and tiles—a growing collection of business and mission-centric tools available out of the box. Training, Personnel Certifications, Workflows Status, and more will help users see successes and spot areas where further follow-up is needed.

See the Big Picture or Drill Down into the Details

NEW Acadis Insights provides leaders with at-a-glance dashboards to see a high-level operational overview with easy drill-down capabilities into specific training compliance data to identify exactly where a workflow is blocked. Need to share important visualizations? NEW Acadis Insights allows you to email dashboard views on demand or by scheduling one-time or recurring distribution of updated information.

Acadis Data Lake with Business Intelligence Benefits

Take the Load Off!

By accessing a near real-time copy of production data within your individual, secure Acadis Data Lake, you are free to create more sophisticated and complex queries that would normally trigger the 30-second time limit to run Acadis Advanced Data Exports. Plus, by leveraging the independent data store, there's absolutely no performance degradation to your production Acadis solution, no matter how many Power BI users run simultaneous queries and data visualizations using the Acadis Data Lake.

Industry Leading Security for Acadis SaaS Customers

Because each Acadis Data Lake resides within the customer's existing AWS FedRAMP isolated environment, this architecture ensures strict data security and governance while maintaining full client control over their data access.

On-the-Fly Data Visualizations that Answer Important Questions

By supporting industry-standard Business Intelligence tools compatible with AWS Athena, like Microsoft Power BI, users can transform vast amounts of Acadis data into compelling visualizations using a variety of graphs, charts, tables, and designs—making it easier than ever to present information in the most impactful way to address even your toughest business questions.

Acadis Premier Data Services Subscription Benefits

Talent to Make the Most of Acadis Data Lake with Business Intelligence

The Acadis Premier Services Team staffs Premier Data Managers who have a deep technical understanding of the Acadis data tables and structures, who are trained in Power BI, and can provide the technical expertise you need to set up comprehensive, interactive dashboards and reports that streamline your decision-making process with clear, intuitive visuals. Set up KPI reports for your stakeholders, leverage graphical dashboards to uncover inefficiencies, and share powerful insights with your leadership team.

A Premier Data Manager helps you take control of your data by standardizing formats, eliminating inconsistencies, and ensuring accuracy. By cleaning, structuring, and optimizing your data, it will be easier to generate meaningful reports and uncover actionable insights. This foundation not only improves day-to-day analytics but also empowers your organization to make faster, more confident decisions.
