

# Acadis Premier Data Manager (PDM) Subscription Overview

## *Your Data-Focused Technical Expert*

Specialized Data-Focused Expertise for Insight, Automation, and Integration

The Acadis Premier Data Manager (PDM) subscription brings deep technical expertise to help your organization fully realize the power of your Acadis data. With a flexible, client-driven approach, your PDM supports the creation of custom reports, automation workflows, Power BI data visualizations, SQL-based data exports, and robust integration between your systems and Acadis based on existing Acadis APIs.

Whether working in your Acadis instance or Power BI environment directly (when permitted) or providing step-by-step implementation guidance, your PDM translates business needs into powerful tools for decision-making and efficiency — all while aligning with your broader Acadis goals.

## What's Included

### **Acadis Custom Reports**

Design, develop and maintain Acadis Custom Reports.

### **Power BI Expertise**

Support for Power BI dashboards and direct visualization builds.

### **Advanced Data Exports (ADEs)**

Build and maintain custom SQL-based Acadis exports tied to operational or analytic use cases.

### **API Integration Support**

Set up and support existing Acadis API endpoints for data exchange and automation.

### **Automation Projects**

Solutions using Power Automate and other tools for efficiency and scalability.

### **Data Projects & Cleanup**

Standardize, clean, and structure client data for better analytics.

### **Acadis Visuals**

Visual customization of the Acadis system (e.g., Custom Report client branding and setup guides for targeted splash page tiles).

### **Release Evaluation**

Review saved queries and visuals with each release to ensure accuracy and proper functionality.

## How It Works

### Flexible Subscriptions

PDM support is delivered within your organization's selected Premier Services level: Platinum, Gold, Silver. Each level defines the annual client engagement capacity of your PDM and available services.

**Client-directed:** Client sets priorities.

**Data Visualizations:** The PDM collaborates within the client's Power BI environment (where access is granted) to tailor visualizations to client goals and data literacy level, creating setup guidance as needed.

**Data Mining:** Targeted ADEs can be built and leveraged to extract your most detailed data reporting needs.

**Stable APIs:** PDM handles needs analysis, configuration, and ongoing support as needs evolve.

**Efficient Processes:** PDM designs and delivers automated solutions that reduce manual effort and support operational workflows.

**Reliable Data:** PDM brings both technical and strategic lens to optimizing data quality and usability.

**Professional Look and Feel:** Based on client branding, user experience needs, and usage patterns.

**Performance Continuity:** PDM proactively audits ADEs, reports, visualizations, and dashboards to ensure continued performance.

## Flexible Delivery Based on Client Priorities

Whether you need a full reporting overhaul or targeted assistance with one dashboard, the PDM aligns with your priorities—and collaborates closely with your Premier Account Manager (PAM) or other strategic contacts when assigned.

## Working Together, Seamlessly

The PDM is a critical member of your Premier Services team—distinct from but complementary to the Premier Account Manager (PAM) and Premier System Administrator (PSA) support types. Where the PAM orchestrates your broader Premier strategy and the PSA maintains Acadis operations, the PDM focuses on the data layer—empowering insight, automating processes, and connecting your systems.

## Ready to Experience the Premier Difference?

Unlock personalized support, and expert solutions tailored to your needs by contacting your Sales Account Executive to schedule your Premier Services consultation.
