Introducing Scenario Simulator

Personalized Skill-Building: Where Knowledge Becomes Action

Scenario Simulator is Vector Solutions' AI-driven conversational practice, built directly into the TargetSolutions courses your employees, supervisors, and first responders already use. Multiple-choice scenarios can test what someone knows, but building a skill takes practice. Scenario Simulator replaces those multiple-choice knowledge checks with a live, AI-driven practice conversation. Learners respond in their own words and get coached in the moment, with feedback grounded entirely in expert-authored, purpose-built content.

Say It

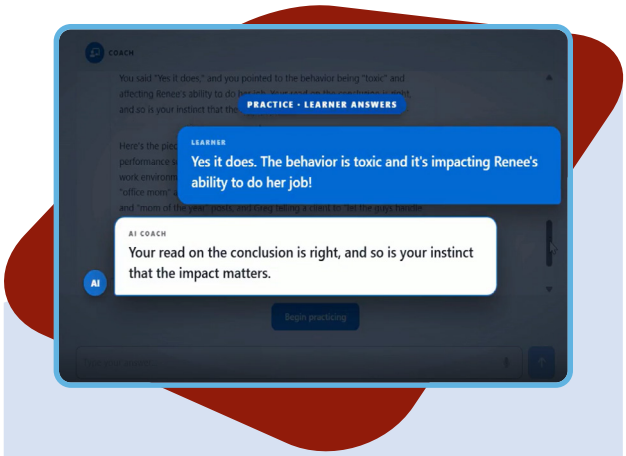

Learners respond to a scenario in their own words, by text or voice.

Practice It

The AI coach provides feedback and moves the conversation forward, based only on expert-authored content, never the open internet.

Reinforce It

Every scenario ends with the expert-validated ideal response, so every learner walks away with the same clear takeaway.

Why It Matters for Your Agency

- The moments that matter most (spotting a hazard, recognizing warning signs, responding to harassment) call for judgment and empathy, not memorizing a policy.
- One live scenario can consolidate multiple knowledge checks into a single practiced conversation.
- Scenario Simulator isn't a generic chatbot, it's a training coach grounded in 25+ years of public safety and government training expertise, built around how learners actually acquire and retain skills.

Initial Scenario Simulator Courses Are Currently Included At No Additional Cost For Organizations That Already License The Course.

Course Spotlight

Workplace Violence — "Reading the Warning Signs"

A supervisor reads escalating warning signs from a passed-over employee and responds at each stage, from a workplace grievance to a weapon on the premises.

Now Available in Four Public Sector Courses - Hazard Communication (GHS) | Harassment Prevention for Employees | Harasment Prevention for Supervisors | Workplace Violence

Rigor You Can Rely On

Expert-authored and human-reviewed, grounded in learning and behavioral science.

Built-in safeguards for when a learner's response raises a concern. The scenario pauses and points them to helpful resources.

Learner choice means learners are informed about the AI-driven Scenario Simulator before starting the course, and anyone who doesn't want to take part can go through their administrator for the standard course.

Designed with seat time in mind. Each scenario takes about 5-10 minutes and replaces existing knowledge checks; completion and credit record to your LMS just like the base course.

Explore Personalized Skill-Building Focused on the Behaviors That Matter Most

Scenario Simulator turns knowledge checks into real practice, helping learners build the judgment and skills they need before the moment is real.
