

The Only Purpose-Built Academy Automation Software for the Fire Service

Save administrative time and centralize all your academy information in one place.

Schedule, register, and manage your instructors, resources, and training operations with Acadis® Academy Automation.

Automatically assign resources

Rooms, equipment, and instructors don't schedule themselves. But when you create custom rules for your needs, scheduling can automatically assign resources—avoiding conflicts and saving time.

Housing made easy

Do your students need a place to stay? Track specific needs (such as accessibility), then assign students to buildings easily and efficiently.

Automate student registration

Publish scheduled classes, automate workflows, and maximize class and testing event fill rates. Each student's professional history and training data tracked in the system transfers automatically to the course roster, reducing effort and preventing errors.

Give personnel real-time insight with online testing

Leverage Acadis online testing to give students real-time insight into their results. Automate grading, reporting, and analysis—and continually refine the assessment process—so you can focus on leadership and growth.

Create custom surveys

Continually improve your training, courses, and other initiatives with this fully integrated survey builder module. Create, customize, and electronically distribute surveys—and store the results for thorough evaluation.

What's Included	How Does It Benefit Our Academy?
Training	<ul style="list-style-type: none"> • Track and manage training (online and in person), certifications, expirations dates, qualifications, and test scores • Automate class creation from templates, graduation processing, weighting/scoring of student exams • Ensure accountability with legally defensible hire-to-retire training records
